

Proof That **Travels**

Ship Love. Ship Light.

ส่งความรัก ส่งอย่างรักษ้โลก

 *"Every parcel already carries love across borders. We make it carry proof of something more."*

The moment

Every parcel is already carrying **someone's love** abroad.

A mother in Chiang Mai ships a gift to her daughter overseas. The box carries her love. Now it can carry proof she shipped it greener.

|  (20-sec story) Open warm, the Thai way. Land on: "that box can carry proof too."

The problem

83% love DHL, yet almost none know **it's already green.**

DHL does real, expensive, first-mover green work. At the ServicePoint counter, it's invisible, so customers have no idea they're part of it.

|  "High satisfaction, near-zero sustainability awareness. That's the gap we close."

The insight

Thais care, but won't act, so we reward the choice **they already make.**

The value-action gap kills green behaviour. Our move: don't ask anyone to pay more or do more. Show them they're already helping, for free, every time they ship.

 "We remove the cost and the effort. The good is already happening, we just make it felt."

The big idea

Proof That **Travels**

One honest act of good, made **felt, visible, shareable, and collective**, at the exact moment of shipping. The proof rides the parcel across the border.

 "Onto the box, across the border, onto a national map, into the seller's shop. Ship Love. Ship Light."

Four pieces that feed each other into **one repeating loop.**

① Feel

A receipt turns an invisible cut into **proof you can hold.**

- Every GoGreen Plus shipment prints: "You funded a verified cut of X kg CO₂ ≈ Y km not driven."
- QR explains the how (SAF / insetting), book-and-claim correct.
- Principle: transparency = trust (Patagonia) + normalize the number (Allbirds).

 "The felt moment. You don't tell them it's green, you hand them the number they made."

The proof crosses the border, then joins **a national total.**

■ **Carry:** a green stamp on the box, the receiver abroad sees it, free cross-border earned media.

■ **Belong:** DHL's real GoGreen Dashboard, localized into Thailand's Green Shipping Map across 36 branches.

 "The parcel literally crosses borders, so the proof does too, and every shipper sees the country's total climb."

④ Spread

SME sellers turn their green choice into a **badge buyers trust.**

- Ship green → unlock a shareable "Ships Greener with DHL" badge in LINE.
- Their overseas buyers see it → DHL's green spreads through sellers' own audiences.
- Mirrors UOB's Sustainability Compass for SMEs, the B2B2C multiplier.

 "The little guy becomes the broadcaster. That's the multiplier, and the UOB mirror."

The repeat engine

We rank by **greenness, not bigness**, so **SMEs can win.**

Nong's Crafts · 40 parcels → GOLD beats MegaCorp · 8,000 → BRONZE

 "Ranked by the greenness of your choices, not your size. A home seller wears Gold while a corporation sits at Bronze. We protect SMEs by design, it's in the math."

The evidence

The demand is already real, and the market is **a trillion baht.**

12,000+

APAC customers use GoGreen Plus

฿1T+

Thai e-commerce · ~30% cross-border

~10%

conservative opt-in (proven 10–30%)

1,600+

SMEs on UOB's Compass

43 vs 12

EVs, DHL vs FedEx in Thailand

 "Not hypothetical. Every number is sourced. (Avoid the landmines in _CRITICAL \$1.)"

It has worked before

Honesty-led green campaigns measurably move people.

+30%

Patagonia "Don't Buy This Jacket" — honesty drove sales

75%

say IKEA's sustainability improves how they see the brand

DHL's own Thai SMEs already do this: Kasikornbank & The Board Factory ship on GoGreen Plus

 "We're not guessing. Honesty-led green campaigns lift real metrics, and DHL's own Thai customers already prove the demand. We just make it felt at scale."

The \$5M plan

\$5M buys awareness; customers fund the carbon.

Phase 1 · wk 1–3

Build & baseline survey

Phase 2 · wk 4–8

Launch across 36 ServicePoints

Phase 3 · wk 9–12

Spread & prove (ROI readout)

🔍 "Measured by a pre/post survey, the same method DHL used to get the 83%."

Every baht is costed from real Thai market rates.

- In-branch ฿1.5M $\approx$ ฿41.7k/branch $\times$ 36 — signage + print at Gogoprint/Octopus scale.
- Video ฿750k $\leftarrow$ ฿20k/day studio floor (Bangkok production rate) $\times$ shoot + edit.
- Measurement ฿350k $\leftarrow$ 2 survey waves $\times$ 200+ respondents (valid-tracking minimum).

 "We costed bottom-up from real rates, then added a 5% contingency. Indicative, but every line has a derivation — not a guess."

Our promise sits on a real, audited supply chain.

We don't build the chain — we build the awareness layer on top of it

audited to ISO 14083; customers finally see the chain they're part of

Precise enough to **survive** **2026's rules**, built around UOB.

- **Green-Claims mastery:** "you funded a verified reduction," never "your parcel flew on SAF." Book-and-claim, survives EmpCo 2026.
- **Compliance-first:** LINE is opt-in under Thai PDPA; every claim is Consumer-Protection-Act safe. Precision is our legal shield.
- **The UOB mirror:** the Compass starts the SME journey; Ship Light lets them prove it.

 "That precision is why our campaign is bullet-proof, legally and commercially, and why it mirrors the bank in the room."

The close

**X tonnes cut, and a
country that knows
it shipped them.**

Ship Love. Ship Light.

 "We don't tell people DHL is green, we hand them proof they helped, and let it travel. Thank you."

On the ground in Thailand, DHL **already** leads.

	DHL Express TH	FedEx TH	UPS
EVs in Thailand	43 (18.9% of fleet)	12	minimal
SAF use	~10% of fuel, top-3 buyer	2 US airports	goal 30% by 2030
Usable green product	GoGreen Plus at counter	carbon-neutral opt	carbon-neutral opt

How the score works, and how we define "small".

- $\text{Score} = 100 \times [0.50 \cdot \text{GreenRate} + 0.20 \cdot \text{Consistency} + 0.20 \cdot \text{Momentum} + 0.10 \cdot \text{Depth}] \times \text{Credibility} \times \text{SizeBoost}$
- "Small" = DHL's own SME/ServicePoint account flag, aligned to Thailand's OSMEP definition ($\leq \$300\text{M}$ / 100 staff).
- Credibility floor (~5 shipments) blocks the "100% from 1 parcel" trick.

Every figure traces to a **named source**.

- 9.7% global WTP / ~11% APAC — PwC 2024 Voice of the Consumer.
- 12,000+ / 2,800 / 2,000 GoGreen Plus — DHL press 2024.
- 185kt SAF, ~10%, top-3 — GreenAir 2026. UOB ฿33.96B — Digital Banker / Bangkok Post.

Why our SAF claim is compliant, not greenwashing.

- GoGreen Plus is book-and-claim: the parcel may not physically fly on SAF.
- DHL buys certified SAF in its network; the customer gets a verified reduction certificate.
- We say "you funded a verified reduction," never "your parcel flew on SAF." Insetting, not offsetting.

One walk-in becomes a **self-spreading loop**.

- Walk in → staff one-liner → choose GoGreen Plus → Green Receipt prints (FEEL).
- Box leaves with the Green Stamp (CARRY) → receiver abroad scans it.
- National Map ticks up (BELONG) → SME unlocks Seller Badge (SPREAD) → repeat.

The questions we **already** answered.

- "Why only 36 branches?" → pilot footprint; scales to DHL TH's full 71.
- "Won't big firms dominate the tier?" → rate-based scoring; see A2.
- "Is awareness measurable?" → pre/post survey, DHL's own 83% method.
